-Introduction-

Star Wars: Knights of the Old Republic is definitely the best Star Wars game out there. In my opinion it is the best game out there too. If you have the slightest interest in RPG games then buy this. It's well worth the \$50 you spend. It was so fun that I played this about 4 hours a day . It is pretty long too if you do all the sidequests. The whole game took me about 50 hours. There are so many great things about this game and barely any bad things. It was one of the most enjoyable games I've played in years and if you have played any video game then you should play this. Another masterpiece for Xbox.

-About the Guide-

This is a very long awesome game so I'm going to just write about the main quest and a few important side quests. This walkthrough is for a male soldier on the light side. I will be on the hard difficulty too so if you are playing on normal then some things might be easier than I say. To change the difficulty go the Load/Save menu. Then go to gameplay and change normal to hard. Also try reading the tips before you read the wlkthrough because they help a lot. If you read this whole guide you won't have any trouble with this game. Before creating your character you should look at the Character Class chapter and before picking your Jedi Class look in the corresponding chapter again.
