KotOR2 doesn't seem to run on Vista on some computers.
  Here is one solution to fix this problem:
  (Please remember that this solution is offered to you at no guarantee or warranty. Use it at your own risk.)

  1) You'll need KotOR1 to be installed.
  2) Locate the file **Mss32.dll** in the KotOR1 game folder.
  3) Now copy it to the KotOR2 game folder. Be sure to make a backup copy of the original just in case problems occur.
  4) Now make sure the compatibility setting on the KotOR2 shortcut is set to run as Windows XP (Service Pack 2).
  5) If you don't have KotOR1 installed just download the file provided on our KotOR forums .
