There are a variety of crystals available to upgrade your lightsaber. Each saber can hold one color crystal and two power crystals. The five main color crystals are yellow, blue, green, violet and red. There are also two special "color" crystals: Mantle of the Force (white) and Heart of the Guardian (orange) that change the enhancements offered by the power crystals.

This is a list of each of the crystals with which I am familiar and their enhancements with a normal color crystal, Mantle of the Force and Heart of the Guardian.

on Kashyyyk (can't remember which one at the moment). The Solari crystal is found on Shaela's corpse in the terentatek chamber of Naga Sadow's tomb on Korriban. The Sapith and Upari crystals are found in the Ancient Temple on the Rakata homeworld. Mantle of the Force and Heart of the Guardian can only be purchased from Suvam Tan on the Yavin Space Station once you have helped him fight off the Trandoshans. Together they cost about 45,000 credits.
